

How to calculate conductivity

(at /work11/conductivity)

(1) msden1 (msden1.dat)

(2) msden_make_bi.pro

この2つで、中性大気密度を計算する (MSIS86)
(作成したnden*dat を/ESR00/msdenへ移動する)

(3) cal_con_cp1.pro

edit **cal_con_cp1.dat** (if iuse_file1=1 in the program)

Conductivityを計算。

(4) plot_con1.pro

作図およびheight integrated conductivityを計算。

EDIT

(msden1.dat and guisdapmin) or **cal_con_cp1.dat**

(5) plot_zcon.pro

height integrated conductivityをプロット

(6) make_ascii_con.pro

make ASCII file of the conductivity data.

まとめてやるのならz:
